CLIMATE, AGRICULTURE AND HUMAN MOBILITY PROGRAMME FOR THE SOUTH-EAST

Building Climate-Resilient Livelihoods as an Alternative to Distress Migration

*Institutional Anchor: Michael Okpara University of Agriculture (MOUAAU), in partnership with Ogonnaya
Onu Polytechnic*

1. Summary

The South-East faces acute climate pressures, gully erosion in Abia, Anambra and Enugu, flooding along the Anambra River basin, and declining agricultural yields which increasingly function as drivers of distress migration and displacement. The Southeast Migration Dialogue 2026 Communiqué (Priority 9) explicitly calls for the integration of migration and human mobility into climate adaptation and development planning. CSO_{net}MADE Abia proposes a Climate, Agriculture and Human Mobility Programme that combines climate-smart agricultural skills training for rural youth, evidence-generation on climate mobility in the South-East, and diaspora agri-investment facilitation, converting a migration driver into a development opportunity, anchored in a university of agriculture.

2. Policy Alignment

- SEMD 2026 Communiqué - Priority 9 (climate and human mobility);
- NMP 2025 - addressing drivers of migration at sub-national level;
- Global Compact for Migration - Objectives 2 (minimise adverse drivers) and 19 (climate resilience);
- Partner priorities on climate adaptation, green jobs and food security.

3. Key Components

- Climate-smart agriculture and agribusiness training for 1,000 rural youth, with incubation and market linkage, creating viable local alternatives to irregular migration;
- A South-East climate-mobility observatory at MOUAAU producing evidence for state adaptation and development plans;
- Early-warning linkage between environmental stress, displacement risk and community resilience planning with state MDAs;
- A diaspora agri-investment window channelling remittances into climate-resilient value chains.

4. What We Bring

MOUUAU's agricultural faculty and research capacity under MOU; Ogbonnaya Onu Polytechnic's technical training platform; CSONetMADE's rural community network across the five South-East states; and the SEMD convening mandate on climate mobility.

5. What We Seek

Funding for training delivery and incubation grants, research support for the observatory, and technical assistance on climate-smart methods. This programme offers partners a demonstrable migration-and-climate flagship in Nigeria's South-East, directly responsive to the SEMD Communiqué.

Dr Charles Ukauwa,
