SOUTH-EAST MIGRATION DATA AND EVIDENCE SYSTEM

*Strengthening Evidence-Based Migration Governance for the Abia State Migration Agency and the
Southeast Migration Working Group*

1. Summary

The SEMD 2026 Communiqué identified weak data as the single most binding constraint on South-East migration governance. CSONetMADE Abia proposes to build a functional data and evidence architecture to serve the emerging Abia State Migration Agency (whose establishing Bill is before the Abia State House of Assembly), the proposed Southeast Migration Working Group (SMWG), and state development planning. The system will generate disaggregated migration profiles, returnee statistics and quarterly evidence products, and build the capacity of state MDAs to produce and use migration data.

2. Policy Alignment

- SEMD 2026 Communiqué - Priorities 2 (research and evidence) and 7 (migration data);
- NMP 2025 - data generation, management and utilisation at sub-national level;
- Global Compact for Migration - Objective 3 (accurate, disaggregated data);
- Partner priorities on governance, evidence-based programming and monitoring.

3. Key Components

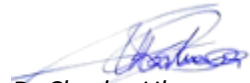

- Design and deployment of a South-East migration data framework, interoperable with federal systems;
- State and zonal migration profiles, including returnee mapping in support of NCFRMI's planned rehabilitation centre;
- Capacity-building for the Abia State Migration Agency, SMWG secretariat and state MDAs;
- A joint research programme with MOUAU and Ogbonnaya Onu Polytechnic, feeding an annual State of Migration in Abia report.

4. What We Bring

The convening mandate for the SMWG arising from SEMD 2026; two university research partners under MOU; collaboration with NCFRMI; and direct liaison with the Abia State House of Assembly process on the Agency Bill.

5. What We Seek

Technical assistance and data-systems infrastructure, training funding, and research grants. This investment underwrites the credibility of every other migration intervention in the region and offers partners a verifiable evidence base for their own programming.
